Technical Note: 0004

Process to transfer your software license to another computer.

Prerequisites: RASWin Licensing Tool RASWinHasp.exe. Could be found on RTE folder where RASWin is installed, a shortcut to it is also present in the RASWin application menu from Windows.

It also could be downloaded from:

http://www.raswin.eu/raswinupdates/RASWinHasp.zip

Before transfering the license you must install our vendor runtime RTE or RASWin software in both source and destination machines:

If you are moving the license from server to server and you don't have RASWin, the RTE could be downloaded from:

http://www.raswin.eu/raswinupdates/VendorRTE.zip

Instructions to install the RTE for servers could be found on **RASWin Technical Note Number 003**.

Note: Licenses could only be moved locally, if you want to move a license that you is running from a server you can not perform this procedure from the remote client.

Vendor RTE or RASWin must be installed on both computers, source and destination.

On the Machine that is not currently licensed for RASWin

- **1)** Execute tool **RASWinHasp.exe** in the machine you want to transfer the license.
- 2) In the dialog select tab **Transfer License**
- **3)** Select a destination file name for your recipient machine by entering a name or clicking the [...] button.
- **4)** Press button **Collect and Save Information.** This will generate a .ld file that you should copy to the machine where you've the active license

Technical Note: 0004

On the Machine that is currently licensed for RASWin

- **5)** Go to the machine that currently has the license and also execute **RASWinHasp.exe** tool.
- 6) In the dialog select tab Transfer License, were on Step 2.
- **7)** Load the recipient computer collected data file by clicking in the button [...] near the button "Read the recipient information file from".
- **8)** Give a new name to your new license data or browse your machine for where to put the new license file.
- 9) Click the Generate License Transfer File, a h2h file is generated.

Your new license file (h2h) will be generated, copy it to the machine which is not currently licensed for RASWin.

On the Machine that is not currently licensed for RASWin

- 11) Execute tool RASWinHasp.exe
- 12) In the dialog select tab Apply License File.
- In the bottom of the dialog press the browse file button [...] and locate the newly generated h2h file.
- 14) Click Apply Update.

After that your license should be installed and you can run RASWin normally.
